

Be the Solution to Water Pollution!

Nonpoint source water pollution, also known as runoff pollution, is the largest water quality problem in the United States today. Help be a solution to pollution by:

- ✓ Keeping your car in good working condition. Oil and automotive fluids leaked onto streets, roads, driveways and parking lots can be carried to surface water in runoff or seep into the ground water.
- ✓ Using fertilizer and pesticides wisely on farm fields, gardens and in the home landscape. These chemicals can also pollute ground and surface water if over used or misused.
- ✓ Preventing soil erosion. One of the most common pollutants found in our streams, lakes, and rivers is sediment. Help keep soil in place by maintaining a vegetative cover.

Celebrate Kentucky Water Awareness Month!
